

ASSIGNMENT 02

3) What is another word for row? For column?

Ans→ Another word for row is “tuples” and another word for column is “field”.

4) Why isn't it possible to see the first five rows of a table?

Ans→ sql tables represent unordered sets. so there is no such thing as the first five rows or last rows.

Unless a column explicitly defines the ordering a table has some sort of auto incremented is column, which can be used for this purpose.
